SnapBridge Quick Tips Video Tutorials

With Nikon SnapBridge, you can connect SnapBridge enabled Nikon cameras to your compatible smart device running the SnapBridge app, for downloading of images off of your camera as well as remote photography (select models).

These two video tutorials shows you how to connect to the app on your compatible iPhone[®], iPad[®] or iPod[®] touch or Android[™]-powered smartphone or tablet.

Once you've connected your compatible camera and smart device, view, download and share your images, add text to them and even set your camera's clock to sync with your smart device. Then upload your photos to the internet, share via email or text messaging, save them to Nikon Image Space or other cloud storage sites and more.

For more details on SnapBridge enabled Nikon cameras and to see a list of which Nikon cameras utilize SnapBridge, [click here](#).
