Camera Grand Prix 2006 Award May 2006

Nikon Corporation is pleased to announce that the D200 digital SLR camera has been selected by Japan's Camera Press Club to receive the Camera Grand Prix 2006 award. The Camera Grand Prix is the Japanese photo industry's most prestigious award for a camera.

The committee members issued the following statement in support of bestowing the Camera Grand Prix 2006 honor on the D200. "The Nikon D200 contributes to the widespread dissemination of photographic culture as a digital SLR offering superior operability at an affordable price for both entry-level digital SLR camera users as well as professional and high-end amateur photographers."

The Technical Image Press Association (TIPA) May 2006

Best Expert DSLR...Nikon D200

Accompanying its award for Best Expert DSLR, TIPA cited; D200 photographers can shoot at up to ISO 400 and even 800 without meaningful concern about noise or color shifts, while the camera's 3D Color Matrix Metering II measures exposure superbly without blowing highlight details. However, it's the D200 handling speed which really impresses. It's up and running in just 0.15 seconds, and has a shutter lag of a mere 50ms. It offers a framing rate of up to 5 frames per second for at least 37 consecutive shots in Fine JPEG, and the stunning performance is supported by a new 11-area AF system that the photographer can select at will.
