D200

APRIL - MAY 2006

Shutterbug May 2006

According to Shutterbug Editorial Director, George Schaub, digital SLR cameras have "opened up a new world of low-light and handheld shooting" and the built-in Noise Reduction filter in Nikon's D200, made it an "even more attractive pastime." Schaub also states that the D200 delivers imaging power for enlargements, crops to 8x10 prints and has more imaging options than one could imagine – not much this camera cannot handle.

Popular Photography & Imaging April 2006

Popular Photography & Imaging Executive Technology Editor, Michael McNamara, clarified some of his unanswered questions during an in-depth review of the D200 in the magazine's April issue. Stating that images from the D200 "rival" those from the D2X, McNamara gave the D200 a rave review. He also notes that the D200 has superb color accuracy, and the images it produces have great saturation and a wide dynamic range.
